# The easiest winter feed!

More and more beekeepers are using Bifor ready to use winter feed. The main attraction is convenience – you do not need to prepare your own sugar solution and can be confident that your bees are getting an optimal feed.

Bifor is sold in buckets of 16 kg, the right amount for one hive. All you need to do is remove the protective tape from the holes on the lid, turn the bucket upside down and place it over the feeding hole on the hive. Your bees will take care of the rest.

Simple, clean and reliable!

**1.** Check that the lid of the bucket is firmly in place.

**2.** Remove the protective tape from the lid.

**3.** Press the lid firmly until the sugar solution is pressed out of the holes.

# Better comfort for your bees!

Bifor contains only 25% water, whereas ordinary sugar solutions contain approximately 40% water. This means your bees do not need to waste precious energy fanning condensate out of the hive. When fed with ordinary sugar solution, bees use about 20% of the energy in the sugar to fan away condensate. Bifor gives your bees a more comfortable winter, since they don't need to work unnecessarily and can use all the energy from the feed for their survival.

4. Keep the lid pressed down when you turn the bucket over the opening in the hive roof. When you release the pressure, the resulting vacuum inside the bucket prevents the sugar solution from flowing too quickly for the first few minutes.

# Clean feed – increased safety

Unlike ordinary sugar solution, Bifor contains inverted sugar which does not need to be in the bees' intestines. This reduces the risk of contamination, disease and winter losses in the bee colony. Bifor ensure your bees a safer winter.

**5.** Finally, replace the cover of the hive. After about a week, the bees will have stored the sugar solution and you can remove the empty bucket.
